Introduction

The West Lindsey CCTV and Monitoring Service provides monitored CCTV for the benefit of the wider public, partner agencies and customers. We use the latest in CCTV technology to deliver high quality surveillance that keeps people, property and assets safe.

Our Control Centre monitors and records all footage from our camera network. With direct communication links to the police and other agencies we use camera footage to prevent and detect incidents of crime, public disorder, anti-social behaviour, theft and more.

Our CCTV Coverage

We operate public space CCTV in Gainsborough, Market Rasen, Hemswell Cliff and Caistor. This includes cameras in town centre areas, hot spots, car parks, public parks and buildings.

All of our camera are overt and clearly identifiable. A full list of our public space CCTV cameras is available to view online: www.west-lindsey.gov.uk/cctv

Our People

All of our CCTV Operators have to meet strict training requirements to ensure they use CCTV cameras legally and effectively. On-going training takes place to keep skills up to date and we regularly conduct security screening and vetting.

We work closely with partners and customers to provide excellent customer service whilst creating safety in our local communities.

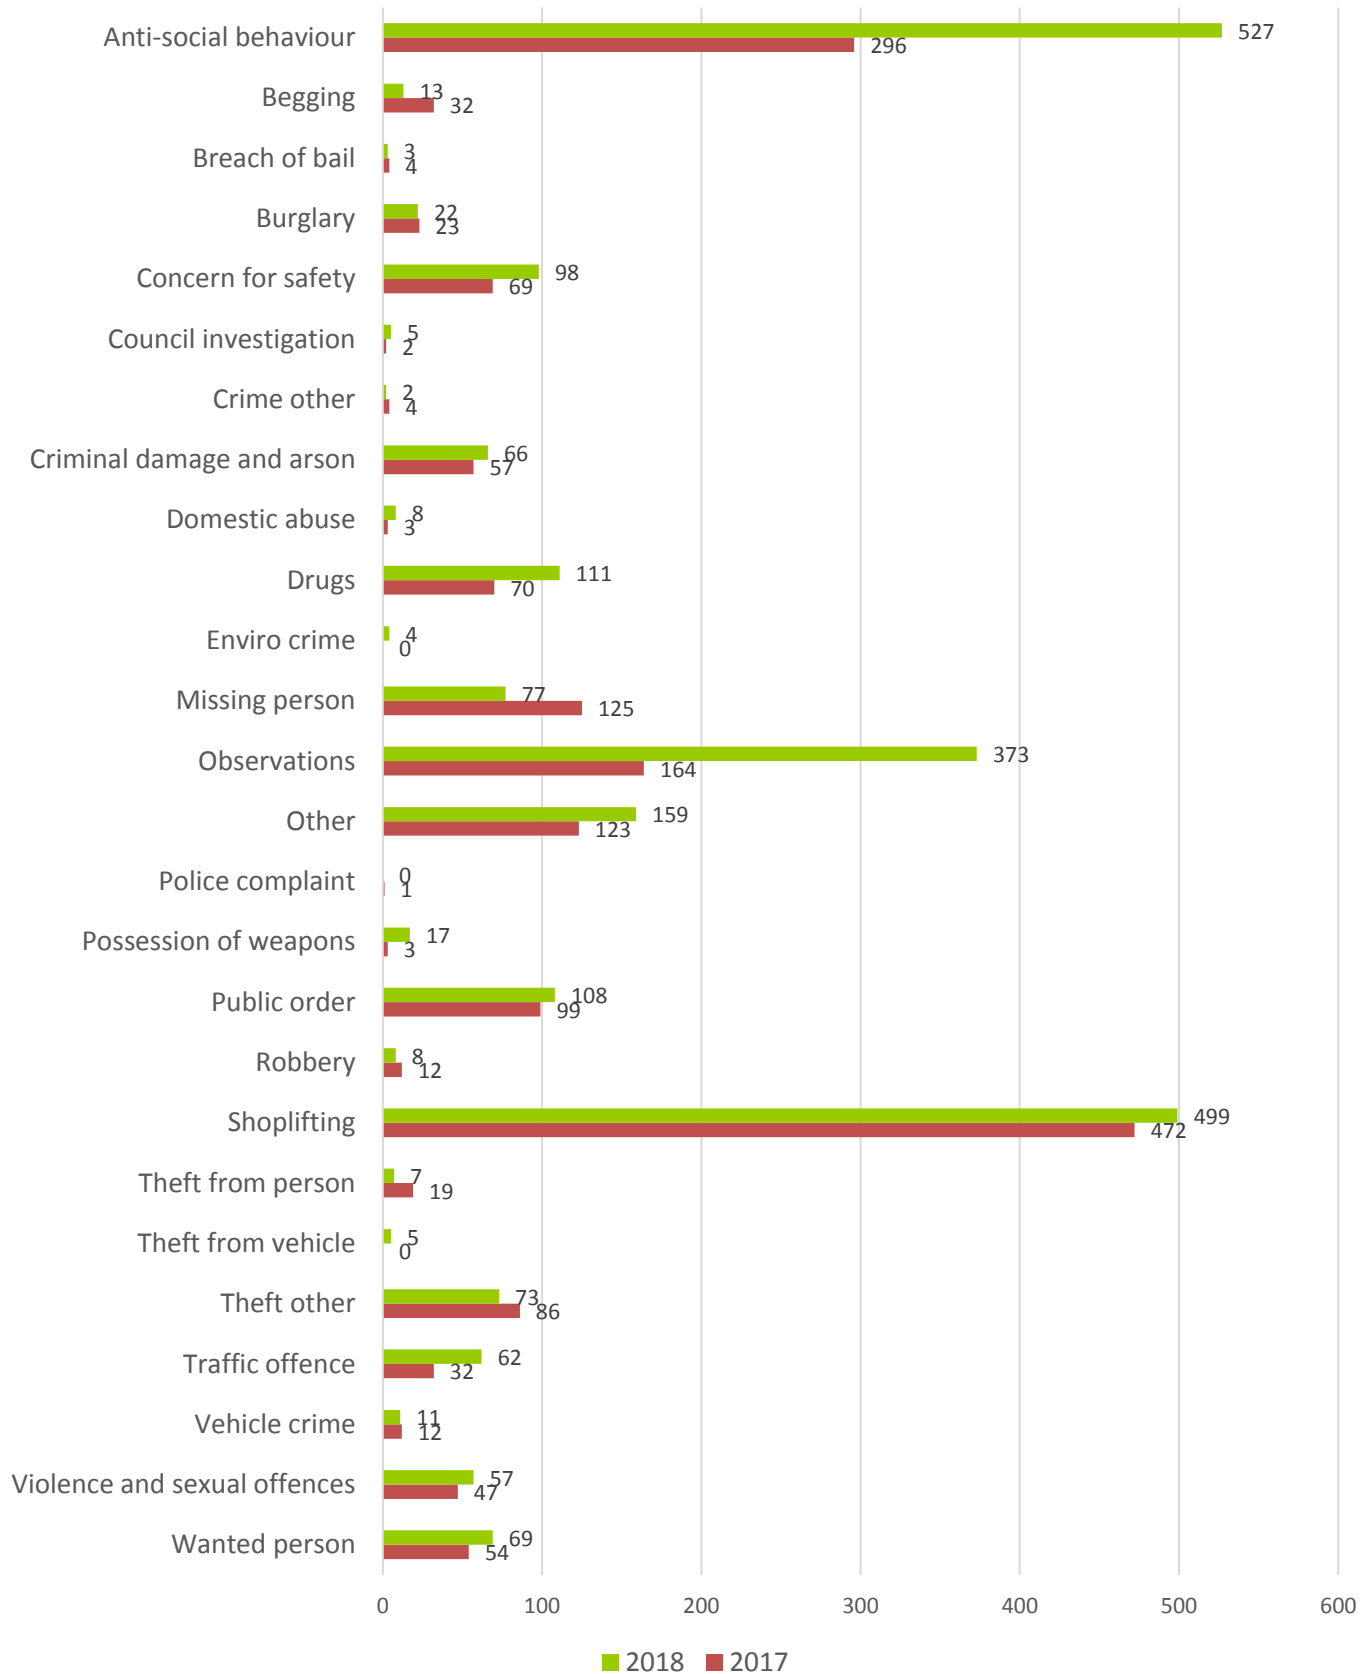

CCTV Code of Practice

To ensure our service is fully accountable we operate in accordance with a CCTV Code of Practice. This Code details how the service is managed, operates on a day to day basis and protect access to information. We take data protection and personal privacy very seriously. It is vital we have strong mechanisms in place for public protection to that people can have trust in the use of CCTV.

Our CCTV Code of Practice is available to view online: www.west-lindsey.gov.uk/cctv
